

Original Articles

- 265 **Finite element analysis of the effects of different archwire forms and power arm positions on maxillary incisors in en masse retraction using fixed lingual orthodontic appliances** 
Hilal Tarkan, Ihsan Sami Guvenc
- 274 **Upper airway dimensions and craniofacial morphology: A correlation study using cone beam computed tomography** 
Ana Rita da Rocha Martins de Carvalho, Maria Cristina Figueiredo Pollmann, Eugénio Joaquim Pereira Martins
- 284 **Genetic polymorphisms in external apical root resorption and orthodontic tooth movements: A systematic review** 
Ana Luiza Cabral de Ávila Andrade, Yasmin Dias de Almeida Pinto, Bernardo Emerenciano Barros Maia, Joice Dias Corrêa, Diogo de Azevedo Miranda, Flávio Ricardo Manzi, Izabella Lucas de Abreu Lima
- 303 **Effectiveness of autologous leukocyte-platelet-rich fibrin on the rate of maxillary canine retraction, rotation, pain, and soft tissue healing: A split-mouth randomized controlled trial** 
Subrat Kumar Satapathy, Surya Kanta Das, Ashish Kumar Barik, Devpartim Mohanty, Sunil Kumar Rath, Mitali Mishra
- 316 **Dentoalveolar effects of open-bite correction with the dual action vertical intra-arch technique: A finite element analysis** 
Sérgio Estelita Barros, Kelly Chiqueto, Franciele Alberton, Katherine Jaramillo Cevallos, Juliana Faria, Bianca Heck, Leonardo Machado, Pedro Noritomi
- 325 **Correlations of temporomandibular joint morphology and position using cone-beam computed tomography and dynamic functional analysis in orthodontic patients: A cross-sectional study** 
Bin Xu, Jung-Jin Park, Seong-Hun Kim

AIMS AND SCOPE

The Korean Journal of Orthodontics (KJO) is an international, open access, peer reviewed journal published in January, March, May, July, September, and November each year. It was first launched in 1970 and, as the official scientific publication of Korean Association of Orthodontists, KJO aims to publish high quality clinical and scientific original research papers in all areas related to orthodontics and dentofacial orthopedics. Specifically, its interest focuses on evidence-based investigations of contemporary diagnostic procedures and treatment techniques, expanding to significant clinical reports of diverse treatment approaches.

The scope of KJO covers all areas of orthodontics and dentofacial orthopedics including successful diagnostic procedures and treatment planning, growth and development of the face and its clinical implications, appliance designs, biomechanics, TMJ disorders and adult treatment. Specifically, its latest interest focuses on skeletal anchorage devices, orthodontic appliance and biomaterials, 3 dimensional imaging techniques utilized for dentofacial diagnosis and treatment planning, and orthognathic surgery to correct skeletal disharmony in association of orthodontic treatment.

The KJO accepts original research articles, selected case reports, invited narrative reviews, and reader's forum queries. The manuscripts submitted to KJO are processed through online edit system for expedient and efficient submission, review and edit procedures. As of January of 2012, KJO (abbreviated as 'Korean J Orthod') is indexed in SCIE, SCOPUS, PubMed Central (PMC), Google Scholar, DOI/Crossref, Korea Citation Index (KCI), KoreaMed, KoreaMed Synapse and KoMCI. The KJO is financially supported by the Korean Association of Orthodontists.

THE KOREAN JOURNAL OF ORTHODONTICS
